Subject index

Page numbers marked with an asterisk denote book reviews

Abaca, diseases **86*
Acidity
  cassava, moist-solids fermentation *188*
  mangoes *69*
Agriculture *see also* Cultivation, Harvesting etc
  multiple cropping **165*
  tropical **174*
  tropical, economics **35*
Alcohol, production in moist-solids fermentation *191*
Alkalis, sisal dyeing *see* Sodium bicarbonate and Sodium carbonate
Ammonium phosphate, moist-solids fermentation of cassava *184*
Andhra Pradesh (state), India, dietary survey *6*
Angola, pulp production *219*
Aroids, post-harvest deterioration *49–63*
Aroma, concentrated and dried foods **250*
Ascorbic acid, mangoes *69*
Aspergillus fumigatus, moist-solids fermentation *183*
Aspergillus niger, moist-solids fermentation of cassava *192*
Atta *see* Wheat flour

Bacillus subtilis, moist-solids fermentation of cassava *192*
Bacteria *see also* under specific names
  tropical root crops *55*
Bagasse, pulp for papermaking *233*
Baking **36*
Bananas
  crown rot complex, fungicidal control *107–120*
  diseases **86*
Bavistin, bananas, crown rot control tests *109*
Beans, field, as food **85*
Belize, *Pinus oocarpa*, gum turpentine analysis *203*
Benomyl, bananas, crown rot control *109*
Bibliography, insecticide materials of vegetable origin *245*
Biochemistry **44*
Biosynthesis, protein in moist-solids fermentation *183*
Blood, goat carcass *77*
Boards, building, timber **262*
Bone, goat carcass *80*
Botryodiplodia theobromae, bananas *108*
Brazil, pulp production *219*
Bread **36*
  chemistry **250*
  food consumption in India *6*
Butchery, goats *75–83*

Calixin, bananas, crown rot control tests *109*
Calories, intake, India *7*
Camellia sinensis see Tea
Canada, pulpwood production prospects *216*
Carcass, goat, evaluation *75–83*
δ-3-Carene, gum turpentine analysis from *Pinus* spp. *195–206*
Caryophyllene, gum turpentine analysis from *Pinus* spp. *195–206*
Cassava
  flora **89*
  post-harvest deterioration *49–63*
  protein enrichment by moist-solids fermentation *179–194*
  toxicity **87*
Ceratocystis paradoxa, bananas *108*
Cheese, plant proteases, utilisation in cheesemaking *149–153*
Chile, pulp production *219*
Chilling injury, mango storage *65–73*
Classification, subjects in Technical Index, Tropical Products Institute *238*
Coffee, food consumption in India *6*
Colletotrichum musae, bananas *108*
Colocasia esculenta see Taro

Colour
  mangoes *69*
  sisal, craft dyeing *121–147*
  tea infusion *17*
Colza, as protein source, industrial plant *24*
Conferences, assistance and participation by PFAI *12*
Containers, transport of cargo **169*
Cooking, meat **251*
Copyright, in developing countries **173*
Costs *see also* Prices
  dye and sodium chloride for dyeing sisal *130*
  protein extraction from seed meals *33*
  pulp production *210, 227*
Cotton, as protein source, industrial plant *24*
Crops, multiple cropping **165*
Cultivation, multiple cropping **165*
Curing, tropical root crops *59*
Curtis, John **41*
Curvularia senegalensis, bananas *108*

Dal, food consumption in India *7*
DAM 18654, bananas, crown rot control tests *109*
Dasheen *see* Taro
Dehydration, fruits and vegetables **248*
Delvocoat
  bananas, crown rot control tests *109*
  mangoes, storage treatment *68*
Diseases *see also* Pests
  bananas, plantains and abaca **86*
Drechslera sacchari, bananas *108*
Drying *see also* Dehydration **92*
  protein concentrate *31*
Dyeing
  craft dyeing of sisal *121–147*
  exhaust method *124*
  pad-batch method *134*
Dylon Cold dyes *124*

Ecology
  economic development **42*
  plants **255*
Economics **96*
  ecological principles **42*
  tropical farming **35*
Education, nutrition and cooking *7*
Eggs, food consumption in India *6*
Embathane, bananas, crown rot control tests *109*
Enzite, experimental use in cheese-making *150*
Enzygel, experimental use in cheese-making *151*
Enzymes *see also* under specific names
  milk coagulation in cheesemaking *149–153*
  preparation by fermentation *193*
  tea 'fermentation' *15–22*
Epigallocatechin, tea analysis *18*
Ethrel, mangoes, storage treatment *68*
Eucalyptus, pulp *221*
Export, pulp and paper *228, 230*

Fat, goat carcass *80*
Feedstuffs **252*
  moist-solids fermentation *192*
Fermentation, moist-solids, cassava enrichment *179–194*
Fertilisers, fertiliser nitrogen converted to mould protein *183*
Fibreboard, as packaging, tests **263*
Fibres
  craft dyeing of sisal *121–147*
  fibrous materials, pulp for paper-making *233*
Films, nutrition education campaign, India *8*
Filtration, protein concentrate *31*
Fish, food consumption in India *6*
Flavanols, tea analysis *15–22*
Flavour, mangoes *69*
Flours
  cassava *184*
  wheat, marketing studies *10*
Food
  analysis **91*
  chemistry **90*
  dietary surveys, India *5*
  microbiology **247*
  plants **39, *253*
  research **249*
Forests, pulpwood production prospects *214*
Freezing
  cold storage design and administration **250*
  food **251*
  tropical root crops *58*
Fruit, dehydration **248*
Fungi
  banana crown rot complex, control *107–120*
  tropical root crops, losses caused by *55*

Fungicides **171*
banana crown rot complex, control *107–120*
Fusarium spp., bananas *108*

Genetics, *Pinus* spp. *196*
Goats, carcass evaluation *75–83*
Grading, tropical root crops *53*
Groundnuts **160*
as protein source, industrial plant *24*
Guatemala, *Pinus oocarpa*, gum turpentine analysis *202*
Gujarat (state), India, dietary survey *6*
Gum turpentine, analysis of some *Pinus* provenances *195–206*

Hardwoods, pulpwood production prospects *207–236*
Harvesting, tropical root crops, damage *53*
Hibiscus cannabinus see Kenaf
Honduras, *Pinus caribaea* and *P. oocarpa*, gum turpentine analysis *202*
Humidity, mango storage *65–73*

ISI *see* India, Indian Standards Institution
Index, Technical, of Tropical Products Institute *237–246*
India
Indian Standards Institution, protein food standards *11*
Protein Foods Association of India *3–13*
Industry, contribution to PFAI *4*
Information retrieval, Technical Index of Tropical Products Institute *237–246*

Japan, pulpwood production prospects *218*
Juices, fruit and vegetables **248*

Kenaf, pulp for papermaking *234*
Kerala (state), India, dietary survey *6*
Koji, fermentation *180*

Laboratory Index, Tropical Products Institute *243*
Leather
factory for fancy leather goods **95*
marketing and exporting **93*
Legumes *see also* Beans
food **85*
Library Accessions Bulletin, Tropical Products Institute *245*
Linseed, as protein source, industrial plant *24*
Longifolene, gum turpentine analysis from *Pinus* spp. *195–206*

Machinery/equipment *see also* Plant
drier, spray, protein concentrate preparation *31*
dye bath *146*
filter, continuous belt, protein concentrate preparation *29*
protein superconcentrates from seed meals *23–34*
separator, special centrifuge, protein concentrate preparation *31*
shade, tea cultivation *16*
Maharashtra (state), India, dietary survey *6*
Malawi
goat, carcass evaluation *75–83*
tea, effect of experimental shading on chemical composition *15–22*
Malaya, rubber industry, history **257*
Malaysia, palms **256*
Maleic hydrazide, mangoes, storage treatment *68*
Mangifera indica see Mangoes
Mangoes, storage and ripening, Sudan *65–73*
Manihot see Cassava
Marketing
fortified wheat flour and soyabean milk *10*
leather and leather products **93*
soyabeans **158*
tropical sawnwood in Western Europe **261*
workshops, India *7*
Meals, seed meals for protein superconcentrates *23–34*
Meat
cooking **251*
food consumption in India *6*
goat, carcass evaluation *75–83*
Medicines
plants **253*
New Caledonia **254*
Senegal **166*
Microbes, moist-solids fermentation *182*
Microbiology, foods **247*

Milk
coagulation of, in cheesemaking *149–153*
food consumption in India *6*
Milling **252*
Mono terpene, gum turpentine analysis from *Pinus* spp. *195–206*
Morocco, pulp production *219*
Moulds, moist-solids fermentation of cassava *179–194*
Muscle, goat carcass *80*
Mysore (state), India, dietary survey *6*

Naval stores industry, turpentine, analysis of *Pinus* spp. *196*
Nematodes, losses in tropical root crops *56*
New Caledonia, plants, medicinal **254*
Newspapers, nutrition education campaign, India *8*
Nicaragua, *Pinus caribaea*, gum turpentine analysis *202*
Nigrospora sphaerica, bananas *108*
Nitrogen, cassava fermentation *see* Ammonium phosphate and Urea
Nomenclature, biological **97*
Nutrition **99*
cassava toxicity **87*
plant foods **39*
Triticale, wheat and rye **155*

Odour, mangoes *69*
Offal, goat carcass *78*
Oil
palm, cultivation **157*
vegetable oil processing **162*
Oilseeds, meals for protein superconcentrates *23–34*
Oleoresins, gum, analysis of *Pinus* spp. *196*
Oxygen, moist-solids fermentation *191*

PFAI *see* Protein Foods Association of India
Packaging
testing of filled transport packages **263*
tropical root crops, damage and control *58*
use of wood **93*
Palms, Malaya **256*
Papain, protease, use in cheesemaking *149–153*
Paper
industry **259*
protein enrichment by fermentation *191*
pulpwood production prospects *207–236*
Paraffin wax, mangoes, storage treatment *68*
Patents, US patents on fruit and vegetable dehydration **248*
Peanuts *see* Groundnuts
Periodicals, commonwealth directory **173*
Pesticides
biochemical mode of action **170*
industry **264*
tropical root crop storage *57*
Pests *see also* Diseases
control, work of John Curtis **41*
tropical root crop losses *56*
β-Phellandrene, gum turpentine analysis from *Pinus* spp. *195–206*
Pigs **251*
Pine *see Pinus* spp.
α-Pinene, gum turpentine analysis from *Pinus* spp. *195–206*
β-Pinene, gum turpentine analysis from *Pinus* spp. *195–206*
Pinus caribaea, gum turpentine analysis *195–206*
Pinus kesiya, gum turpentine analysis *195–206*
Pinus oocarpa, gum turpentine analysis *195–206*
Plant *see also* Machinery/equipment
cold store **250*
leather goods factory **95*
protein superconcentrates from seed meals *23–34*
pulp and paper mills *227, 229*
Plantains, diseases **86*
Plantations, timber for pulp production *210*
Plants
breeding
cassava **89*
legumes **85*
food **39, *253*
geography **255*
medicinal **253*
New Caledonia **254*
medicinal and toxic, Senegal **166*
proteases, use in cheesemaking *149–153*

Plastics, competition to paper and board *234*
Polyphenol oxidase, tea analysis *15–22*
Potatoes, post-harvest deterioration *49–63*
Prices *see also* Costs
  pulp *208*
Procion MX dyes, craft dyeing of sisal *121–147*
Proteases, plants, use in cheesemaking *149–153*
Protein food
  cassava enrichment by fermentation *179–194*
  work of PFAI *3–13*
Protein Foods Association of India *3–13*
Proteins
  aquatic origin **250*
  food legumes **85*
  superconcentrates from seed meals, industrial plant *23–34*
  Triticale, wheat and rye **155*
  tropical root crops, content *51*
Pulp
  industry **259*
  production figures *215*
  pulpwood production prospects *207–236*
Pulping processes *224*

Reactofil dyes *124*
Refrigeration *see* Freezing
Rennet, alternatives to, in cheesemaking *149*
Rhizopus oligosporus, tempeh mould *185*
Rhizopus oryzae, moist-solids fermentation *185*
Rice, food consumption in India *6*
Ripening
  bananas, crown rot complex of fungi *108*
  mangoes, Sudan *65–73*
Roads, costs, for timber plantations *212*
Root crops *see also* under specific names
  post-harvest deterioration *49–63*
Rubber
  industry, Malaya, history **257*
  technology **168*
Rye, nutritive value **155*

St. Lucia, bananas, fungicidal control of crown rot *107–120*
Scandinavia, pulpwood production prospects *217*
Seedlings, tropical trees and shrubs **38*
Seeds, geographic origin of *Pinus* seeds *197*
Senegal, pharmacopoeia **166*
Separation, protein concentrate *31*
Sesame, as protein source, industrial plant *24*
Sesqui terpene, gum turpentine analysis from *Pinus* spp. *195–206*
Shade, effect on chemical composition of tea *15–22*
Shrubs, seedlings of tropical shrubs **38*
Singapore, palms **256*
Sisal, craft dyeing *121–147*
Sodium bicarbonate, use for fixing sisal dyes *136–144*
Sodium carbonate, use for fixing sisal dyes *129, 136–144*
Sodium chloride, use to assist dye adsorption by sisal *127, 130*
Softwoods, pulpwood production prospects *207–236*
Soils **174*
Soya, as protein source, industrial plant *23–34*
Soyabeans **158*
  milk, marketing studies, India *11*
Sporotrichum thermophile, moist-solids fermentation *191*
Sprouting
  losses in tropical root crops *55*
  suppressants, tropical root crops *57*
Standards, protein foods, India *11*
Starch
  conversion to protein in moist-solids fermentation *191*
  mangoes *71*
Sterilisation, cassava flour, moist-solids fermentation *186*
Storage
  dye powders *145*
  mangoes, Sudan *65–73*
  tropical root crops, damage to *54*
Straw, protein enrichment by fermentation *183*
Sudan, mangoes, storage and ripening *65–73*
Sugars
  mangoes *69*
  production in moist-solids fermentation *191*
Sulphate pulping process *227*
Sun, effect on chemical composition of tea *15–22*
Sunflower, as protein source, industrial plant *24*

Swaziland, pulp production *219*
Sweet potatoes, post-harvest deterioration *49–63*
Swine *see* Pigs

Taiwan, pulp production *219*
Tamil Nadu (state), India, dietary survey *6*
Taro, post-harvest deterioration *53*
Taxonomy, *Pinus* spp. *196*
Tea
  chemical composition, effect of shade *15–22*
  food consumption in India *6*
Technology, foreign technology in developing countries **163*
Temperatures
  dye liquor for dyeing sisal *130*
  heat production in moist-solids fermentation *182*
  mango storage *65–73*
  tropical root crops storage *58*
Terpenes, analysis of gum turpentine from *Pinus* spp. *200*
Theaflavins, tea analysis *15–22*
Thiabendazole, bananas, crown rot control tests *109*
Timber
  as packaging **93*
  building boards **262*
  market for tropical sawnwood **261*
  Pinus spp., gum turpentine analysis *195–206*
  pulpwood production prospects *207–236*
  seedlings of tropical trees **38*
Topsin-M, bananas, crown rot control tests *109*
Totapuri, mango variety, storage and ripening in the Sudan *65–73*
Toxicity
  cassava **87*
  toxic plants, Senegal **166*
Transport
  bananas, shipping *110*
  container stowage **169*
  tropical root crops, damage and control *53, 58*
  wood chips/bundles, shipping *231*
Trees *see* Timber
Triforine, bananas, crown rot control tests *109*
Triticale **155*
Tropical Products Institute, Technical Index *237–246*
Tunisia, pulp production *219*
Turpentine, analysis of some *Pinus* provenances *195–206*
Turtles **167*

United States of America, pulpwood production prospects *215*
Urea, moist-solids fermentation of cassava *184*

Vegetables, dehydration **248*
Verticillium theobromae, bananas *108*
Viruses, losses in tropical root crops *55*

Water
  loss, damage to tropical root crops *54*
  possible need for water treatment when used in sisal dyeing *145*
Wetting agents, use in sisal dyeing *129–130, 136*
Wheat
  flour, marketing studies *10*
  nutritive value **155*
Wood *see* Timber

Yams, post-harvest deterioration *49–63*

Zambia, *Pinus kesiya*, gum turpentine analysis *198*

Author index

ACHAYA, K.T.
The Protein Foods Association of India: present work and future goals *3–13*

BERNARDINI, E. and BERNARDINI, M.
Industrial apparatus for the production of protein superconcentrates from seed meals *23–34*

BERNARDINI, M.
see BERNARDINI, E.

BOOTH, R.H.
Post-harvest deterioration of tropical root crops: losses and their control *49–63*

BURLEY, J.
see GREEN, C.L.

CANNING, A.J. and JARMAN, C.G.
Procion MX dyes for the craft dyeing of sisal *121–147*

CAYGILL, J.C.
see COOKE, R.D.

COOKE, R.D. and CAYGILL, J.C.
The possible utilisation of plant proteases in cheesemaking *149–153*

DATTA, V.K.
The Technical Index of the Tropical Products Institute *237–246*

GREEN, C.L., KEEBLE, B. and BURLEY, J.
Gum turpentine analysis of some *Pinus kesiya*, *P. caribaea* and *P. oocarpa* provenances *195–206*

GRIFFEE, P.J. and PINEGAR, J.A.
Fungicides for control of the banana crown rot complex: *in vivo* and *in vitro* studies *107–120*

HILTON, P.J.
The effect of shade upon the chemical composition of the flush of tea (*Camellia sinensis* L.) *15–22*

JARMAN, C.G.
see CANNING, A.J.

KEEBLE, B.
see GREEN, C.L.

MUSA, S.K.
Preliminary investigations on the storage and ripening of 'Totapuri' mangoes in the Sudan *65–73*

OWEN, J.E.
A note on the carcass evaluation of the indigenous Malawi goat *75–83*

PALMER, E.R. and TABB, C.B.
Pulpwood production prospects *207–236*

PINEGAR, J.A.
see GRIFFEE, P.J.

TABB, C.B.
see PALMER, E.R.

TREVELYAN, W.E.
The enrichment of cassava with protein by moist-solids fermentation *179–194*

Book reviews index

Advances in food research, Vol. XX, 1973 *249*

AGNEW, J. and HUNTLEY, J.
Container stowage: a practical approach *169*

ALTSCHUL, S. von R.
Drugs and foods from little-known plants. Notes in Harvard University Herbaria *253*

Annual review of biochemistry, Vol. XLII, 1973 *44*

AURAND, L.W. and WOODS, A.E.
Food chemistry *90*

BERG, A.
The nutrition factor: its role in national development *99*

BURGER, D.
Seedlings of some tropical trees and shrubs, mainly of South East Asia *38*

Commonwealth directory of periodicals: a guide to scientific and professional journals published in the developing countries of the Commonwealth (Commonwealth Secretariat) *173*

Copyright in the developing countries (Commonwealth Secretariat) *173*

CORBETT, J.R.
The biochemical mode of action of pesticides *170*

DALRYMPLE, D.G.
Survey of multiple cropping in less developed countries *165*

DASHMANN, R.F., MILTON, J.P. and FREEMAN, P.H.
Ecological principles for economic development *42*

DRABBLE, J.H.
Rubber in Malaya, 1876–1922. The genesis of the industry *257*

GOOD, R.
The geography of flowering plants *255*

Guide for planning pulp and paper enterprises (FAO) *259*

HASWELL, M.R.
Tropical farming economics *35*

HOBBS, B.C. and CHRISTIAN, J.H.B. (Editors)
The microbiological safety of food *247*

HOCHART, B.
Wood as a packaging material in the developing countries *93*

HOLMES, M.M. (Editor)
International milling and feed manual 1974 *252*

HOUCK, J.P., RYAN, M.E. and SUBOTNIK, A.
Soyabeans and their products. Markets, models and policy *158*

HULSE, J.H. and LAING, E.M.
Nutritive value of *Triticale* protein (and the proteins of wheat and rye) *155*

Information sources on building boards from wood and other fibrous materials (UNIDO) *262*

Information sources on the pesticides industry (UNIDO) *264*

Information sources on the vegetable oil processing industry (UNIDO) *162*

JEFFERY, C. and HEYWOOD, V.H.
Biological nomenclature *97*

KEEY, R.B.
Drying: principles and practice *92*

KERHARO, J.
La pharmacopée sénégalaise traditionnelle. Plantes médicinales et toxiques *166*

Major markets for tropical sawnwood in Western Europe (UNCTAD/GATT) *261*

MEYER, K.R.
Transfer of technology to developing countries—the pulp and paper industry *259*

MONTRESOR, J.M., MOSTYN, H.P. and PAINE, F.A.
Packaging evaluation: the testing of filled transport packages *263*

MORTON, M. (Editor)
Rubber technology *168*

NESTEL, B. and MACINTYRE, R. (Editors)
Chronic cassava toxicity *87*

ORDISH, G.
John Curtis and the pioneering of pest control *41*

Peanuts—culture and uses. A Symposium. (American Peanut Research and Education Association) *160*

Plant foods for man. [Journal] *39*

POMERANZ, Y. and MELOAN, C.E.
Food analysis: theory and practice *91*

POMERANZ, Y. and SHELLENBERGER, J.A.
Bread science and technology *36*

POND, W.G. and MANER, J.H.
Swine production in temperate and tropical environments *251*

RAGEAU, J.
Les plantes médicinales de la Nouvelle-Calédonie *254*

RANT, J.A.
A fancy leather goods factory for developing countries *95*

REBEL, T.P.
Sea turtles and the turtle industry of the West Indies, Florida and the Gulf of Mexico *167*

ROGERS, D.J. and APPAN, S.G.
Flora neotropica, monograph No. 13: Manihot-Manihotoides (Euphorbiaceae) *89*

SCHUMACHER, E.F.
Small is beautiful. A study of economics as if people mattered *96*

SINGH, R.K.D.N.
Guidelines for the acquisition of foreign technology in developing countries *163*

STOVER, R.H.
Banana, plantain and abaca diseases *86*

THOMSON, W.T. (Editor)
Agricultural chemicals. Book IV: Fungicides *171*

TORREY, M.
Dehydration of fruits and vegetables *248*

Tropical Agriculture. [Journal] April 1974 issue *174*

TSEN, C.C. (Editor)
Triticale: first man-made cereal *155*

TURNER, P.D. and GILLBANKS, R.A.
Oil palm cultivation and management *157*

WALL, D. (Editor)
Potentials of field beans and other food legumes in Latin America *85*

WARDLAW, C.W.
Banana diseases, including plantains and abaca *86*

WHITMORE, T.C.
Palms of Malaya *256*

WINTERS, D.
Marketing and export possibilities for leather and leather products manufactured in developing countries *93*

List of plates, figures and tables

The effect of shade upon the chemical composition of the flush of tea (*Camellia sinensis* L.)

Figure 1 Levels of epigallocatechin in shoots of two tea bushes of clone MT 12 *20*

Figure 2 Levels of polyphenol oxidase in shoots of two tea bushes of clone MT 12 *21*

Table 1 Effect of shading upon phenolic composition of two clones of tea *18*

Table 2 Effect of shading upon concentration of (—) epigallocatechin and its gallate throughout the year *18*

Industrial apparatus for the production of protein superconcentrates from seed meals

Plate I Pilot plant used in the experiments *facing 28*

Figure 1 Working diagram for obtaining protein concentrate *26*

Figure 2 Block diagram of pilot plant used for the tests *28*

Figure 3 Continuous filter belt *30*

Figure 4 Section of separator *32*

Figure 5 Hot air drier *33*

Table 1 Composition of meals from protein-rich oleaginous seeds *24*

Table 2 Production of oil-bearing seeds, 1967 *25*

Table 3 Proteins potentially available from oilseeds, 1967 *25*

Table 4 Results from analysis of soya meal samples *27*

Post-harvest deterioration of tropical root crops: losses and their control

Table 1 Productivity of tropical root crops *51*

Table 2 Conditions required for curing root crops *59*

Table 3 Percentage weight loss during storage of cured and uncured root crops *59*

Preliminary investigations on the storage and ripening of 'Totapuri' mangoes in the Sudan

Table 1 Physical characteristics of 'Totapuri' mangoes stored at different temperatures (Experiment 1) *69*

Table 2 Chemical analysis of 'Totapuri' mangoes stored at different temperatures *69*

Table 3 Physical characteristics of 'Totapuri' mangoes stored at different temperatures (Experiment 2) *70*

Table 4 Chemical analyses of 'Totapuri' mangoes stored at different temperatures (Experiment 2) *71*

Table 5 Physical characteristics of treated 'Totapuri' mangoes (Experiments 3 and 4) *71*

Table 6 Chemical analyses of treated 'Totapuri' mangoes (Experiments 3 and 4) *72*

A note on the carcass evaluation of the indigenous Malawi goat

Table 1 Component weights of live goat and goat carcass *78*

Table 2 Muscle, fat and bone composition of left-half of carcass of mature male Malawi goat *79*

Table 3 Muscle, fat and bone in goat carcass hind quarters *79*

Table 4 Muscular composition of lean in hind quarters *80*

Table 5 Muscle, fat and bone in goat carcass forequarter from Animal No. 1 *80*

Table 6 Muscular composition of lean in shoulder of goat carcass from Animal No. 1 *81*

Table 7 Meat to bone ratio (by weight) in carcass components investigated *81*

Fungicides for control of the banana crown rot complex: *in vivo* and *in vitro* studies

Table 1 Primary screening of fungicides using thiabendazole and benomyl as comparative standards *113, 114*

Table 2 Secondary screening of fungicides against banana crown rot, and comparison of actual shipping conditions to England with simulated conditions in St. Lucia *115*

Table 3 *In vitro* activity of fungicides against fungi isolated from the banana crown rot complex *116*

Table 4 *In vitro* activity of fungicides against fungi isolated from the banana crown rot complex *117*

Procion MX dyes for the craft dyeing of sisal

Plates I–VIII Transverse sections of exhaust dyed sisal to show penetration of dye into the fibres *between 134 & 135*

Plate I Procion Blue MX-3G: dyed for ½ h at 25°C *facing 134*

Plate II Procion Blue MX-3G: dyed for 3 h at 20°C *facing 134*

Plate III Procion Blue MX-R: dyed for 3 h at 20°C *between 134 & 135*

Plate IV Procion Blue MX-R: dyed for 3 h at 50°C *between 134 & 135*

Plate V Procion Olive MX-3G: dyed for 3 h at 50°C *between 134 & 135*

Plate VI Procion Red MX-5B: dyed for 3 h at 50°C *between 134 & 135*

Plate VII Procion Yellow MX-4G: dyed for 3 h at 50°C *facing 135*

Plate VIII Procion Orange MX-G: dyed for 3 h at 50°C *facing 135*

Figure 1 Effect of salt concentration on the exhaustion of Procion Red MX-5B *131*

Figure 2 Effect of temperature and alkali on the stability of dye in solution *138 & 139*

Figure 3 Percentage dye fixed at different batching times and using different concentrations of Na_2CO_3 *140 & 141*

Figure 4 Percentage dye fixed at different batching times using $NaHCO_3$ and $NaHCO_3 + Na_2CO_3$ *142 & 143*

Table 1 Economic salt concentrations for exhaust dyeing of sisal with Procion Red MX-5B *131*

Table 2 Salt requirements for exhaust dyeing of cotton with Procion MX dyes *131*

The enrichment of cassava with protein by moist-solids fermentation

Table 1 Fermentation of cassava flour by *Rhizopus oryzae* *189*

Table 2 Uptake of ammonia and urea nitrogen *190*

Gum turpentine analysis of some *Pinus kesiya, P. caribaea* and *P. oocarpa* provenances

Table 1 Summary of average turpentine composition per provenance *200*

Table 2 Turpentine compositions of individual trees of *P. kesiya* selected to show the range of types *201*

Table 3 Turpentine compositions of individual trees of *P. caribaea* selected to show the range of types *203*

Table 4 Turpentine compositions of individual trees of *P. oocarpa* selected to show the range of types *204*

Pulpwood production prospects

Figure 1 Wood pulp prices 1961–74 *209*

Figure 2 Net area of plantation or forest needed for 150,000 tonnes/year pulp *211*

Figure 3 Production and consumption of paper and pulp by area *213*

Figure 4 Regional pulp outputs and forest areas as percentages of world totals *214*

Figure 5 Yield for different types of pulp and paper *223*

Figure 6 Investment requirements for pulp and paper mills *225*

Figure 7 Manufacturing cost of pulp per tonne *226*

Table 1 Comparative road costs, 1968–69, in US $ per km *212*

Table 2 Consumption of paper and paperboard 1970–72 with estimates to 1985 *212*

Table 3 Pulp production, 1972 *215*

Table 4 Consumption of wood in the USA for pulping, 1972 *215*

Table 5 Gross exports of pulps and paper, 1972 *219*

Table 6 Paper consumption by type, % of total, 1970 to 1985 *220*

Table 7 Possible proportion of *Eucalyptus* pulp in various papers *221*

Table 8 Investment and production costs in sulphate process wood pulp mills of different capacity related to those in a 750 tonne per day mill (taken as unity) *227*

Table 9 Costs of pulp mills, 1972 *227*

Table 10 Economies achieved by integrating pulp and paper production in one unit *229*

Table 11 Shipping volume of the wood, as logs and chips, required to make 1 tonne of bleached pulp, relative to the shipping volume of pulp (taken as unity) *231*

The Technical Index of the Tropical Products Institute

Figure 1 Information flow chart *244*

Table 1 A list of main subject headings and common sub-headings *239 & 240*

Table 2 Examples taken from the guide to the Index to show relationships commonly shown by a thesaurus *241*

Table 3 The coconut guide cards (as an example of how the guide compensates for the inevitable scattering of subjects in the main Index) *242*

Table 4 An example of indexed information from a periodical *245*

Volume 16, 1974

Contents

ARTICLES

The Protein Foods Association of India: present work and future goals. By K.T.Achaya, *Protein Foods and Nutrition Development Association of India* 3

The effect of shade upon the chemical composition of the flush of tea (*Camellia sinensis* L.). By P.J.Hilton, *Tea Research Foundation of Central Africa, Malawi* 15

Industrial apparatus for the production of protein superconcentrates from seed meals. By E.Bernardini and M.Bernardini, *Construzioni Meccaniche Bernardini, Italy* 23

Post-harvest deterioration of tropical root crops: losses and their control. By R.H.Booth. *Tropical Products Institute, London* 49

Preliminary investigations on the storage and ripening of 'Totapuri' mangoes in the Sudan. By Sulafa K. Musa, *Food Research Centre, Sudan* 65

Fungicides for control of the banana crown rot complex: *in vivo* and *in vitro* studies. By P.J.Griffee, *Windward Islands Banana Research Scheme, St. Lucia*, and J.A.Pinegar, *Tropical Products Institute, London* 107

Procion MX dyes for the craft dyeing of sisal. By A.J.Canning and C.G.Jarman, *Tropical Products Institute, London* 121

The enrichment of cassava with protein by moist-solids fermentation. By W.E.Trevelyan, *Tropical Products Institute, London* 179

Gum turpentine analysis of some *Pinus kesiya*, *P. caribaea* and *P. oocarpa* provenances. By C.L.Green and B. Keeble, *Tropical Products Institute, London*, and J.Burley, *Commonwealth Forestry Institute, Oxford* 195

Pulpwood production prospects. By E.R.Palmer and C.B.Tabb, *Tropical Products Institute, London* 207

The Technical Index of the Tropical Products Institute. By V.K.Datta, *Tropical Products Institute, London* 237

SHORT COMMUNICATIONS

A note on the carcass evaluation of the indigenous Malawi goat. By J.E.Owen, *Tropical Products Institute, London* 75

The possible utilisation of plant proteases in cheesemaking. By R.D.Cooke and J.C. Caygill, *Tropical Products Institute, London* 149

BOOK REVIEWS *35, 85, 155, 247*

RECENT TPI PUBLICATIONS *45, 103, 175, 267*
